(54) **Aqueous developable, curable composition of matter.**

(57) This invention relates to a novel, curable, aqueous developable composition comprising the reaction product of a mono(meth)acrylate derivative of a caprolactone diol and a styrene-maleic anhydride copolymer.

The exposure of the composition optionally also with a reactive diluent and a photo- or thermal initiator to heat, UV or high energy ionizing radiation results in solid cured products which are useful for making coatings, printing plates and photoresists.
